## 1. Introduction to Age Verification Page

**Magento Age Verification Page** is a solution for websites which require from a user to confirm that he agrees to follow certain rules and conditions (like meeting the required age, ageing with the terms of services, etc.). The module adds a special verification popup window either to a specific category/product or for the whole website which any visitor should pass to be able to access the content.

### Key features:

- Age Verification pop-up window;
- Manage popup content;
- Apply verification window to a product page, category page or for the whole website.

### Overall Information

In certain cases it is necessary to apply some verification process before a user or customer will be able to access the content of the website. That is why we have developed a special module which allows you to create and apply such a verification popup to your store.

The main advantage of this module is that it is very flexible: with this extension you can apply the verification process either to some specific page or directory or for the whole website.

Moreover, the module gives you an option to upload any image and supply it with any text you find necessary. And all this is easy to install and set up.

## 2. How to Install and Deactivate

### Step 1. Check Permissions.

Make sure the "app" and "skin" directories of your Magento and all directories inside them have full written permissions or set permissions on each directory equal to 777 or 0777.

**Important! Change all permissions back after installation.**

Read more about permissions [here](#).

**Step 2:** Use FTP client to upload all folders from the zip package to your Magento site root folder. Be sure that you upload them to the correct directories.

**Step 3:** Login to your Magento administration panel

**Step 4:** Refresh cache (go to System > Cache Management and select Refresh) and disable compilation (go to System > Tools > Compilation and select Disable)

Recommended: Navigate to System > Configuration, if you can see Referralreward tab, the extension is installed right.

**Step 5:** Relogin to admin panel (log out and back into Magento Admin Panel).

**Step 6:** Go to System > Configuration > Referralreward and choose the right settings of extension.

Recommended: You may go to the frontend and try to check out. This will help you to be sure that Referral Bonus and Reward System is working.

**Step 7:** Go to System > Tools > Compilation and select Enable.

That's all! Enjoy the Referral Bonus and Reward System performance.

## How to Deactivate

### Step 1. Disable Extension.

Log into Magento Admin Panel and go to System → Configuration → Referral reward  
→Settings

Select "Disable" to deactivate the extension. Click "Save Config" button.

The extension is now deactivated.

### Step 2. Clear cache.

Go to System → Cache Management.

Clear the store cache.

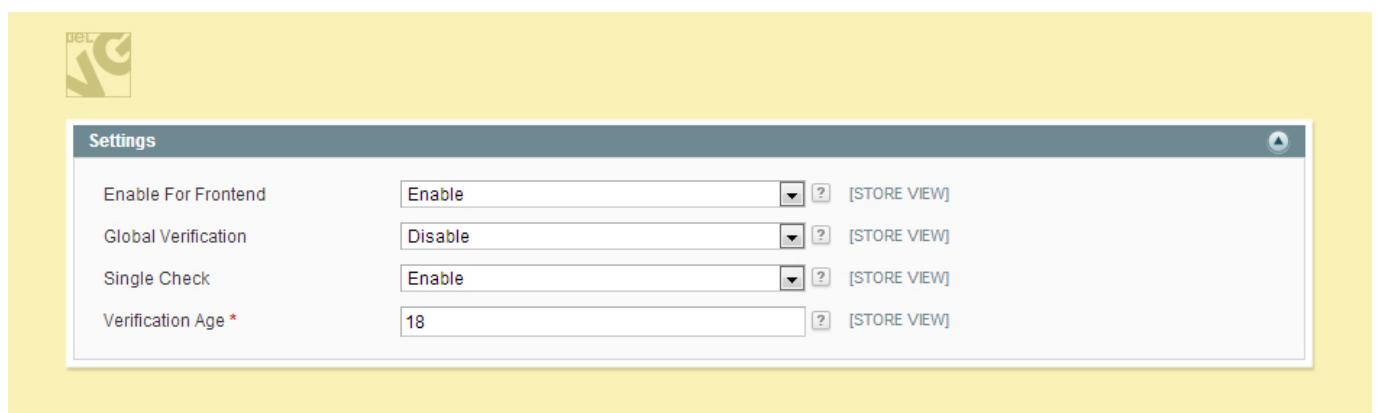

### 3. How to Configure

Once the module is installed it is time to set up our first verification popup window.

Log into your admin panel and go to **System -> Configuration -> Verification Page**.

The available settings include the following options:

- **Enable for frontend** – select Enable to switch on the verification popup for your website;
- **Global verification** – if you select Enable, the verification popup will be applied for all pages;
- **Single check** – single check allows to apply verification only one time. Once the verification is passed, the user will not be asked again when visiting other pages of the website;
- **Verification age** – specify the age which a user should meet when passing the verification;

#### Logo settings:

- **State** – select Enable if you want to display an image on your verification popup;
- **Image** – upload the image file;
- **Keep Image Ratio** – this settings allows to keep the image ratio: if you change one parameter of the image, the module will automatically adjust the other one;
- **Width** – specify image width in pixels;
- **Height** – indicate image height in pixels;

**Popup Window Content**

**Logo**

State: Enable [?] [STORE VIEW]

Image: Выберите файл | Файл не выбран [?] [STORE VIEW]

Keep Image Ratio: No [?] [STORE VIEW]

Width \*: 214 [?] [STORE VIEW]

Height \*: 231 [?] [STORE VIEW]

▲ real image sizes are 214 x 231 pixels

### Text 1:

- **State** – select **Enable** if you want to add some text content to your verification page.
- **Content** – enter the text you wish to display. You can use HTML tags to apply to your text;

### Buttons:

- **State** – if you chose **With Select** option the verification page will offer a user to pass verification by specifying his date of birth, otherwise only **Leave** or **Enter** buttons will be displayed.
- **Leave text** – specify the text to display for the Leave button;
- **Enter text** – specify the text to display for the Enter button;

The screenshot shows a configuration interface for 'Text1' on a yellow background. It is divided into two sections: 'Text1' and 'Buttons'.

**Text1 Section:**

- State:** A dropdown menu set to 'Enable', with a help icon and a '[STORE VIEW]' link.
- Content \*:** A large text area containing the text 'Enter your date of birth', with a help icon and a '[STORE VIEW]' link.
- Below the text area, it says '▲ HTML tags are allowed'.

**Buttons Section:**

- State:** A dropdown menu set to 'With Select', with a help icon and a '[STORE VIEW]' link.
- Leave Text \*:** A text input field containing the text 'Leave', with a '[STORE VIEW]' link.
- Enter Text \*:** A text input field containing the text 'Enter', with a '[STORE VIEW]' link.

## Text 2

Text 2 settings allow you to set up the text content which will be displayed under the Leave and Enter buttons.

- **State** – if you chose **With Select** option the verification page will offer a user to pass verification by specifying his date of birth, otherwise only **Leave** or **Enter** buttons will be displayed.
- **Leave text** – specify the text to display for the Leave button;
- **Enter text** – specify the text to display for the Enter button. You can use HTML tags to apply to your text;

## Confirmation checkbox

- **State** – select Enable to add a confirmation checkbox to the verification page;
- **Text** – specify the text which will be displayed near the confirmation checkbox;

## Advanced settings

Using these settings you can apply your own custom css styles for the page. Just select Enable and enter the styles you wish to use.

The screenshot displays the 'Advanced Settings' section of a BELVG interface. It features three main configuration blocks:

- Text2:** A section with a 'State' dropdown set to 'Enable' and a 'Content' text area containing the text 'Must be 18 or older'. A note below indicates 'HTML tags are allowed'.
- Confirmation Checkbox:** A section with a 'State' dropdown set to 'Enable' and a 'Text' field containing 'I have read and agree to the Terms and Condition:'.
- Custom CSS Styles:** A section with a 'State' dropdown set to 'Enable' and an empty 'Styles' text area. A note below indicates 'HTML tags are allowed'.

Each configuration block includes a '[STORE VIEW]' link for editing the content.

## How to enable a verification page for a specific product or category only?

If you do not want the verification page to show up for the whole website, you can apply it to a specific page or category only.

First of all you need to select **Disable** in the module global settings.

After that go to **Catalog -> Manage Products** -> click the product for which you want to apply the verification page -> in the **Verification page** section select **Yes**

The screenshot shows the Magento Admin interface for the product 'HTC Touch Diamond (Cell Phones)'. The 'Verification Page' field is set to 'Yes'. A handwritten note with an arrow points to this field, stating: "Select 'Yes' to enable verification page for that product only".

The same way you can create a separate verification page for a specific category:

**Catalog -> Manage Categories** -> click the category for which you want to apply the verification page -> in the **Verification page** section select **Yes**.

The screenshot displays the Magento Admin interface for editing a category. The top navigation bar includes 'Dashboard', 'Sales', 'Catalog', 'Mobile', 'Customers', 'Promotions', 'Newsletter', 'CMS', 'Reports', and 'System'. A notification bar at the top indicates a 'Latest Message: Important Magento Community Edition Patch' and '2 unread message(s)'. On the left, the 'Categories' sidebar shows a tree structure with 'Furniture (6)' selected. The main content area is titled 'Furniture (ID: 10)' and features tabs for 'General Information', 'Display Settings', 'Custom Design', and 'Category Products'. The 'General Information' tab is active, showing fields for Name, Description, Image, Thumbnail Image, Page Title, Meta Keywords, Meta Description, Is Active, Include in Navigation Menu, URL Key, and Verification Page. The 'Verification Page' dropdown is set to 'Yes'. A handwritten note with an arrow points to this dropdown, stating: 'Select "Yes" to enable verification page for that specific category only'. Action buttons for 'Reset', 'Delete Category', and 'Save Category' are located at the top right of the form.

## 4. How to use

So, not let's see what kind of verification page your customers will see after you apply it.

We have set up a separate verification page for the Furniture category on our website. So, once you try to load this directory you are welcomed with a verification popup.

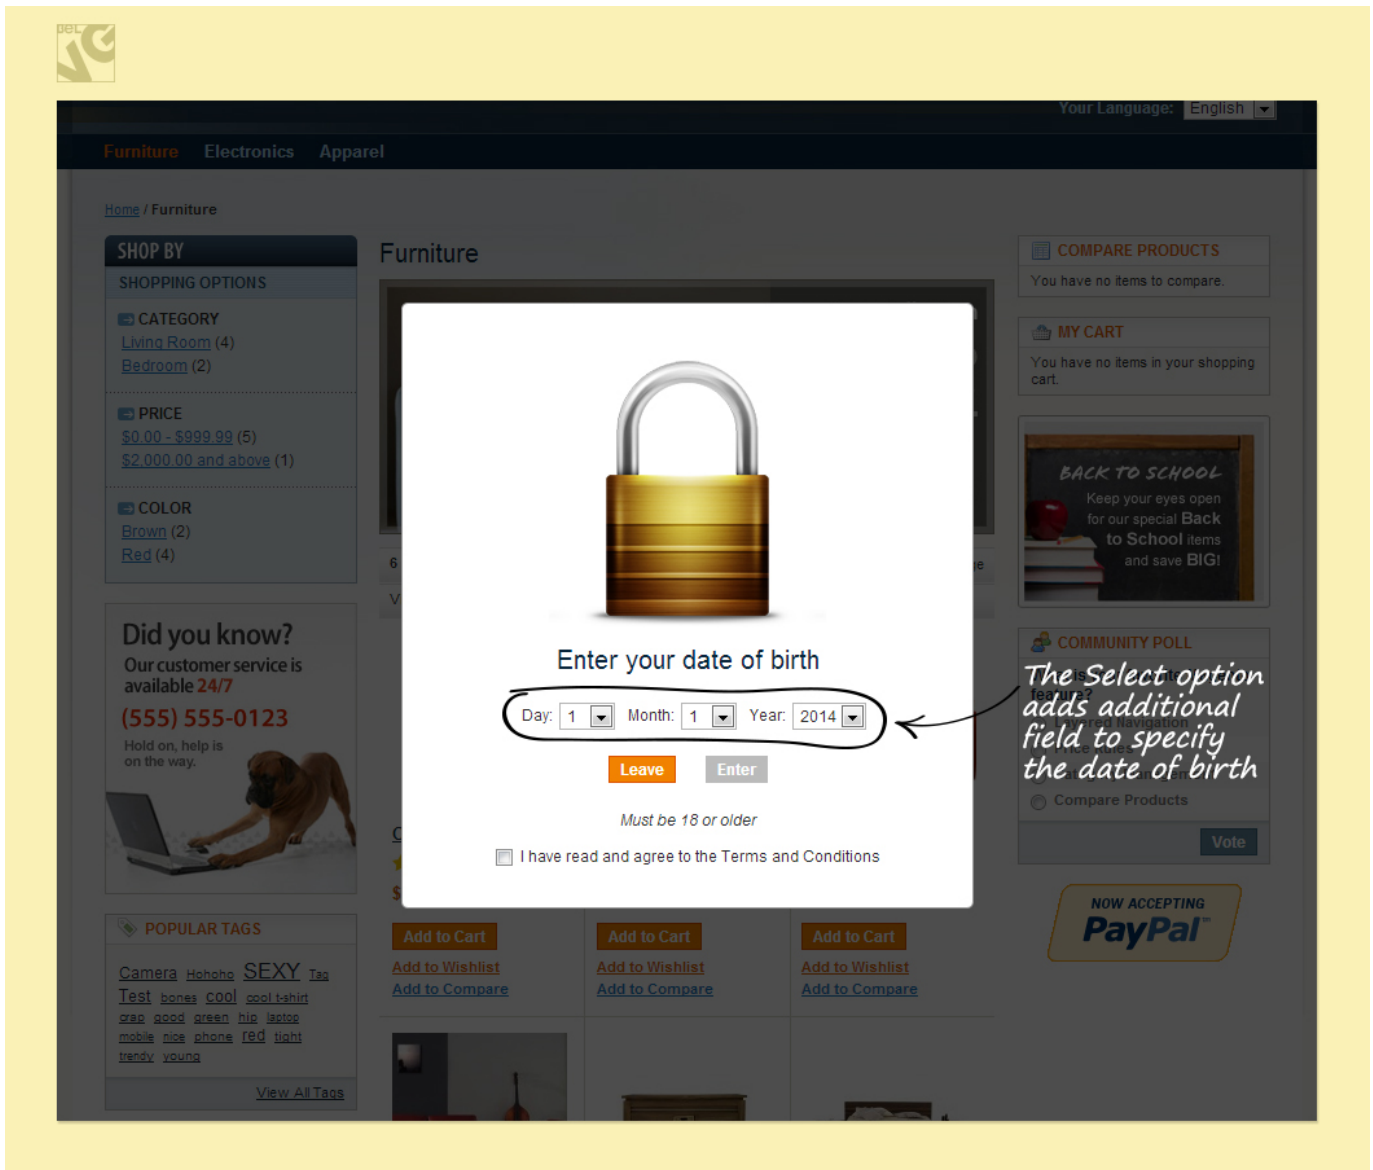

The screenshot displays a website interface with a central verification popup. The popup features a gold padlock icon and the text "Enter your date of birth". It includes three dropdown menus for "Day: 1", "Month: 1", and "Year: 2014". Below these are "Leave" and "Enter" buttons. A note states "Must be 18 or older" and a checkbox for "I have read and agree to the Terms and Conditions". The background shows a website with a "Furniture" category header, navigation menus, and product listings.

The popup window shows up the image which we have uploaded, text content and the verification checkbox

We have also enabled the **Select** option to make users specify their date of birth to pass the verification.

Do you have questions about extension configurations?
