## 1. Introduction to Ajax Loader

Tired of losing customer attention due to long page refresh times? Here's our solution to this problem. When switching between pages or selecting different options on product or category pages customers will see an attractive overlay and animated loader images that will visualize the loading progress. We here think that our **Magento Ajax Loader** module is a real eye-candy and will definitely benefit your Magento store.

### Key features:

- Ajax loader can be displayed both during the page load or when switching between product options;
- Customizable overlay, cursor and main loader images.

## 2. How to Install

Step 1. Check Permissions.

Make sure the "app", "skin", "media" and "js" directories of your Magento and all directories inside them have full written permissions or set permissions on each directory equal to 777 or 0777.

**Important! Change all permissions back after installation.**

Read more about permissions [here](#). Step

Step 2. Disable Cache.

Log into Magento Admin Panel and go to System → Cache Management and disable cache.

Read more about Cache Management [here](#).

Step 3. Disable Compilation.

Log into Magento Admin Panel and go to System → Tools → Compilation and disable the compilation.

Step 4. Upload files

Upload all files and folders from folder to the installation directory of your Magento software using an FTP client. Step

Step 5. Re-login.

Log out and back into Magento Admin Panel.

Step 6. Enable extension.

- Go to System → Configuration. In the left column you will see the new tab – Belvg Extensions.
- Enable extension for the whole website or selected store.

Now extension is installed and enabled.

**After this step you can change all permissions, cache and compilation settings back.**

## How to Deactivate

Step 1. Disable Extension.

Log into Magento Admin Panel and go to System → Configuration → BelVG module → Settings

Select "Disable" to deactivate the extension. Click "Save Config" button. The extension is now deactivated.

Step 2. Clear cache.

Go to System → Cache Management. Clear the store cache.

### 3. How to Configure

Once the module is installed, the settings are available in the admin panel under the **System – Configuration – BelVG Extensions – Ajax Loader** section.

The configurations include the following options:

- **Enable for frontend** – switch this option on to enable the loader for the frontend;
- **Show During Page Loading** – if you disable this option, the loader will appear only when performing Ajax requests (when the customer selects different options on the product page), but not when loading a page;
- **Animation speed** – define the speed of loader animation (in milliseconds).

*General module settings*

Settings		
<b>General</b>		
Enable For Frontend	<input type="text" value="Enable"/>	[STORE VIEW]
Show During Page Loading	<input type="text" value="Enable"/>	[STORE VIEW]
Animation Speed	<input type="text" value="200"/>	[STORE VIEW]

- **Cursor Loader** – enable loader animation for the mouse cursor;
- **Loader image** – upload the image to be used as the cursor loader;

*Cursor loader settings*

Cursor Loader		
Cursor Loader	<input type="text" value="Enable"/>	[STORE VIEW]
Loader Image	<div>  <input type="button" value="Выберите файл"/> <span>Файл не выбран</span> </div> <div> <input type="checkbox"/> Delete Image         </div>	[STORE VIEW]

- **Overlay** – enable loader overlay (the background loader cover);
- **Opacity** – define overlay opacity;
- **Color** – select overlay color;
- **Element** – define the element which loading progress should be visualized with the overlay;

### Overlay settings

Overlay		
Overlay	Enable ▼	[STORE VIEW]
Opacity	0.8	[STORE VIEW]
Color	e6e1e6	[STORE VIEW]
Element	.main-container	[STORE VIEW]

- **Main Loader** – enable main loader;
- **Loader image** – upload the image for the main loader;
- **Opacity** – define main loader opacity.

### Main loader settings

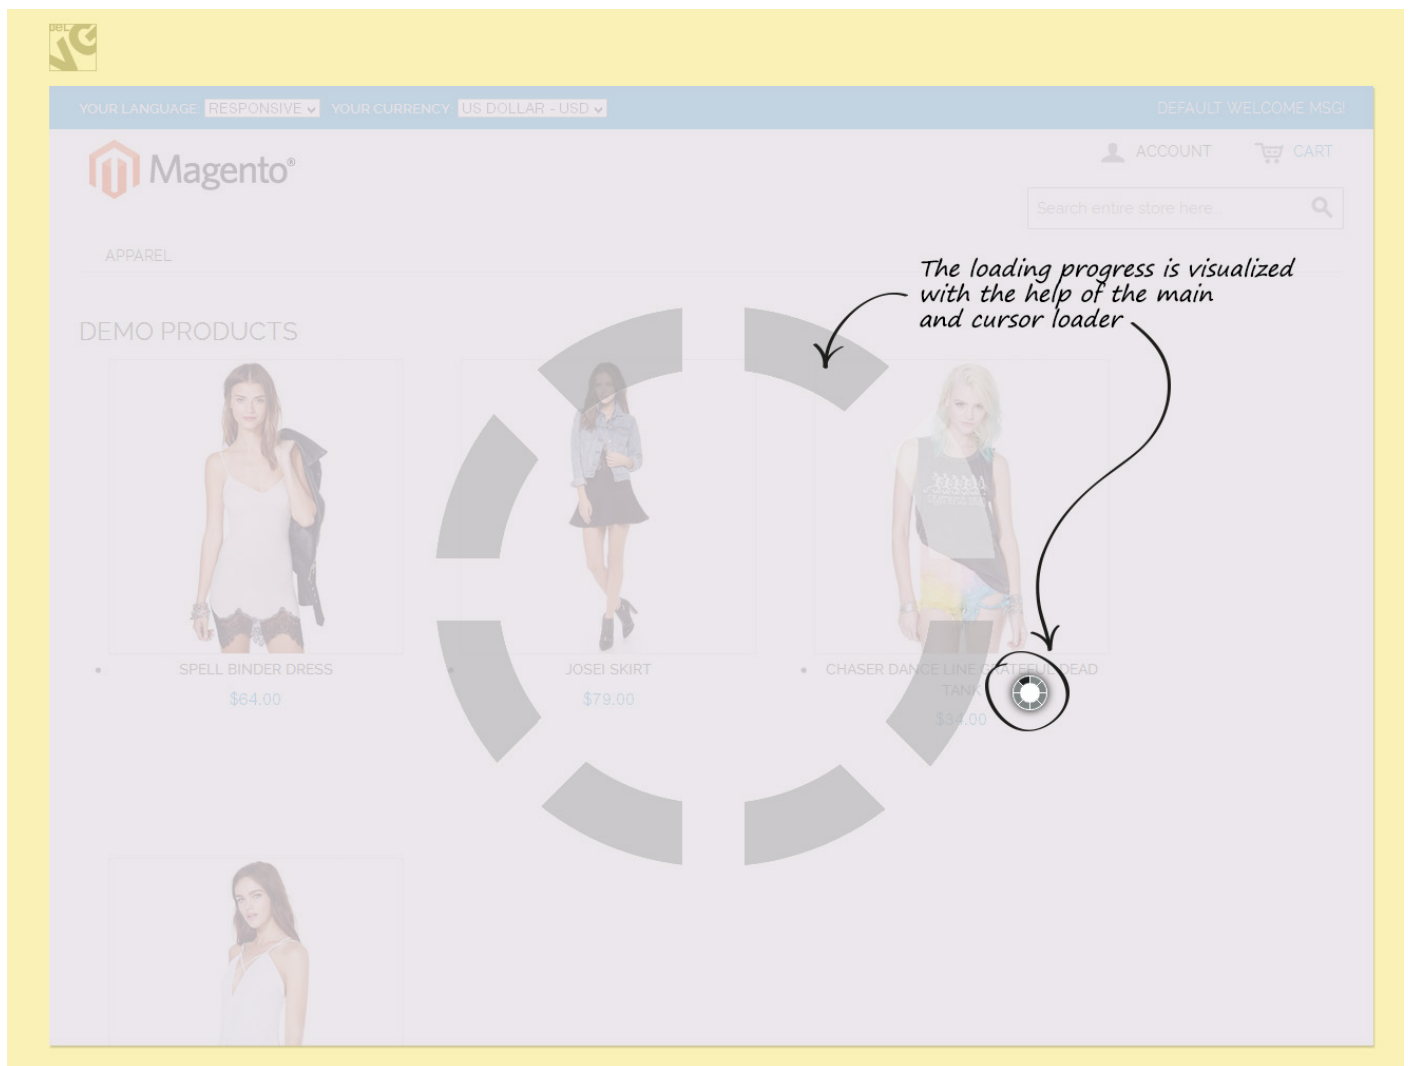

Main Loader		
Main Loader	Enable ▼	[STORE VIEW]
Loader Image	 <div>           Выберите файл           <span>Файл не выбран</span> </div> <div> <input type="checkbox"/> Delete Image         </div>	[STORE VIEW]
Opacity	0.5	[STORE VIEW]

That is all, once all the settings are configured the module is ready to be used!

## 4. How to Use

Now, let's see how the **Ajax Loader** will work on your web store.

When the customer tries to access any page on your website or switches from one page to another, the page loading progress is visualized with the background overlay and two loaders: the main and the cursor loaders.

The loader will also appear when the page is performing ajax requests: when customer is switching between different product options on category pages etc, without page reload.
