## 1. Introduction to Configurable Group Products for Magento 2

This extension helps to combine the functionality of Configurable and Group products. The process of creation of such a product looks completely like the creation of a Configurable product, although the last attribute is deployed on Frontend as a Group product.

This functionality is really useful in case your customers purchase several combinations of a product at once. The extension supports Tier pricing and allows to display the quantity for each combination on Frontend.

### Key features:

- The last attribute of a Configurable product can be deployed on Frontend as a Group product for some particular products;
- Several simple products that are part of a Configurable product can be added to cart at once;
- A possibility to display quantity for each simple product that is part of a Configurable product;
- A possibility to keep quantity inputs saved, upon changing configurable options;
- A possibility to use Tier price;
- A possibility to display Tier price in the default way or as Tooltips;
- If a combination is out of stock, this selection gets inactive.

## 2. How to Configure

Navigate to **Stores => Configuration**. Open the section called “**BelVG extensions**”, find the “**Configurable Group**” extension in this section, and click to open its settings.

- **Enabled For Frontend** - select “**Yes**” to enable the extension for Frontend;
- **Tier Price into Tooltips** - if “No” is selected here, the Tier price is displayed in the default way. If “Yes” is selected here, tooltips are enabled;
- **Show Available Quantity** - Select “**Yes**” if you would like to display the quantity available for each simple product.
- **Quantity saved for each case** – Select “**Yes**” to keep quantity input saved in the fields, when changing configurable options.

*Extension Configuration*

### General

 This module was developed by [www.BelVG.com](http://www.BelVG.com).  
For docs & examples refer to the [BelVG web site](#).  
We have the largest selections of [extensions](#) and [themes](#) on Magento.

### Settings

Enabled For Frontend <small>[store view]</small>	Yes	▼
then, set the `Configurable as Group` attribute into the configurable product		
<hr/>		
Tier price into tooltips <small>[store view]</small>	Yes	▼
Show available quantity <small>[store view]</small>	Yes	▼
Quantity saved for each case <small>[store view]</small>	Yes	▼
when changing Configurable options		

Then create a Configurable product. Find “**Configurable as Group**” and select “**Yes**” to deploy the last attribute of the Configurable product as a Group product on Frontend.

### 3. How to Use

On this example you can see a product that is a sports uniform. Usually it's purchased for the whole team at a time, so our extension is the perfect fit in this case.

Let's see how it makes customers' life easier. Customers can select a Color, then they will see Sizes available for this Color. They can enter the quantity for each Size. Customers can add several uniform sets to cart all at once and don't have to add each one of them separately.

The screenshot shows a product page for a blue sports uniform set. The product is titled "Product - Icon Attributes" and is priced at \$20.00. It is currently in stock with SKU# swh. The product is configurable by color and size. The color selection is set to "Blue". The size selection is shown as a table with columns for Size, Price, Available, and Qty. The sizes available are XS, S, M, L, and XL, all priced at \$20 and available in unlimited quantities. A handwritten note points to the size selection table, stating: "The last attribute of the configurable product is shown as a bundle product". Below the size selection table is an "Add to Cart" button. At the bottom of the page, there is a "Reviews" section with a form for adding a review, including fields for "Nickname" and "Summary".
