1. Introduction to Tablet Dashboard

Stay updated on the sales statistics when you are outside the work/home with Magento Tablet Dashboard extension. Open your tablet or laptop in the car, while walking, during bus rides and business meetings and get all necessary information about your sales rate and recent orders instantly. The extension is fully adapted to the tablet view and offers only the most essential functionality to check the orders and cache management parameters.

Key features

- Magento dashboard on tablets
- Displaying statistics on orders
- Manage cache
- Adding the extension to a home screen

Other specs.

- Easy to change design and layout
- Just HTML 5, CSS 3, and JavaScript
- Device rotation support
- Convenient dropdown menu with key links
- Smooth navigation between categories
- Wishlist
- Easy “shop by” configuration on category pages
- Expanding blocks with products in cart
- Products reviews and ratings
- User-friendly search and results display
- Site map link

Tablet Dashboard

Overall information

If your store growing extensively or you are planning to expand in the future, you need to consider administering the website more often than just at work or at home. Get information about customer orders on the road right from your tablet.

Install **Magento Tablet Dashboard** and pin it to your tablet home screen to use like an app. Full functionality of a standard Magento admin panel is reduced here and only four familiar tabs are left – Dashboard, Orders, Cache Management and Log out. It serves the purpose of tracking the store statistics quickly with no excessive elements.

The extension detects the type of OS and automatically sets the appropriate resolution, size of UI elements and orientation for the device. It is compatible with iOS, Android and other tablet-oriented operating systems.

2. How to Install

Step 1.

Open up your ZIP-file and copy the whole "app and skin" - folders on the main root of your local Magento server (you will need to merge these files).

Step 2.

Log in to your Magento Administration and go to "System" -> "Configuration". Select your store. Inside the **Configuration** section go to "Design". Specify the default Admin Theme name and add the indicated expression.

The screenshot shows the Magento Configuration interface. On the left is a sidebar with 'Configuration' expanded and 'Design' selected. The main area is titled 'Design' and contains two sections: 'Package' and 'Admin Theme'. The 'Admin Theme' section is highlighted with a red rectangle. It shows 'Default Admin Theme' set to 'default'. Below it is an 'Add expression' table with one row: 'Matched Expression' is 'iPad|iPhone|Android' and 'Value' is 'mobileAdminpanel'. There are 'Delete' and 'Add Exception' buttons for this expression. A note below the table says 'Match expressions in the same order as displayed in the configuration.'

Step 3. Refresh Cache in "System" -> "Cache Management".

Select all options. Then refresh your cache. Refresh will refresh your cache. We recommend disabling your cache when installing your theme and re-enabling it after you are done with installing.

The screenshot shows the 'Cache Storage Management' page. At the top right are two buttons: 'Flush Magento Cache' and 'Flush Cache Storage'. Below is a table with columns: 'Cache Type', 'Description', 'Associated Tags', and 'Status'. All 'Cache Type' checkboxes are checked. The 'Status' column shows 'DISABLED' for all items. At the bottom right are 'Refresh' and 'Submit' buttons.

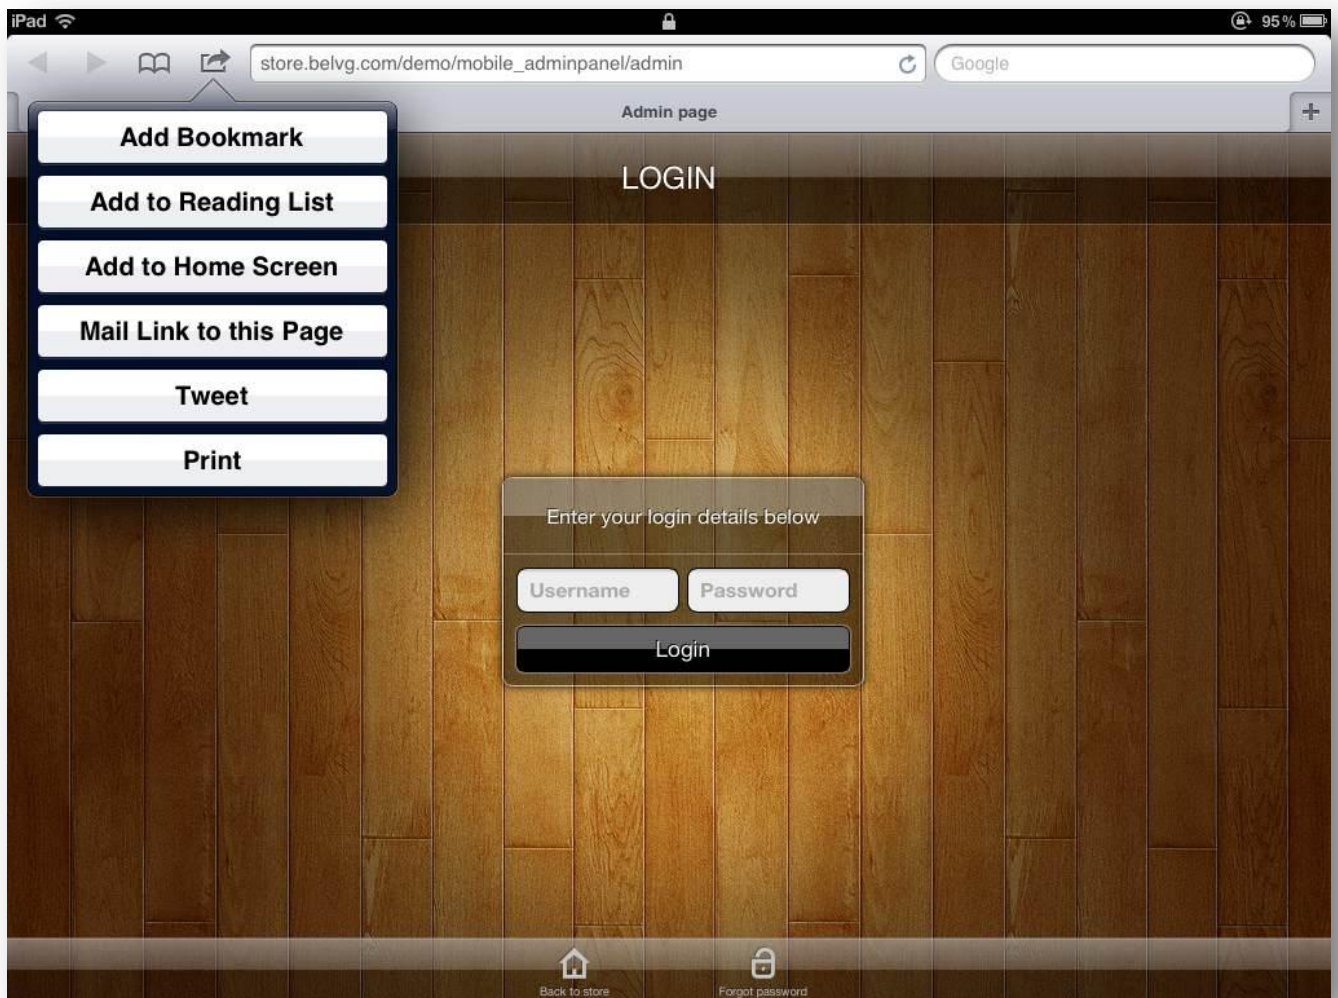

Cache Type	Description	Associated Tags	Status
<input checked="" type="checkbox"/> Configuration	System(config.xml, local.xml) and modules configuration files(config.xml).	CONFIG	DISABLED
<input checked="" type="checkbox"/> Layouts	Layout building instructions.	LAYOUT_GENERAL_CACHE_TAG	DISABLED
<input checked="" type="checkbox"/> Blocks HTML output	Page blocks HTML.	BLOCK_HTML	DISABLED
<input checked="" type="checkbox"/> Translations	Translation files.	TRANSLATE	DISABLED
<input checked="" type="checkbox"/> Collections Data	Collection data files.	COLLECTION_DATA	DISABLED
<input checked="" type="checkbox"/> EAV types and attributes	Entity types declaration cache.	EAV	DISABLED
<input checked="" type="checkbox"/> Web Services Configuration	Web Services definition files (api.xml).	CONFIG_API	DISABLED

3. How to add Tablet Dashboard to a home screen

Here's how to add the extension to your home screen on iOS and Android.

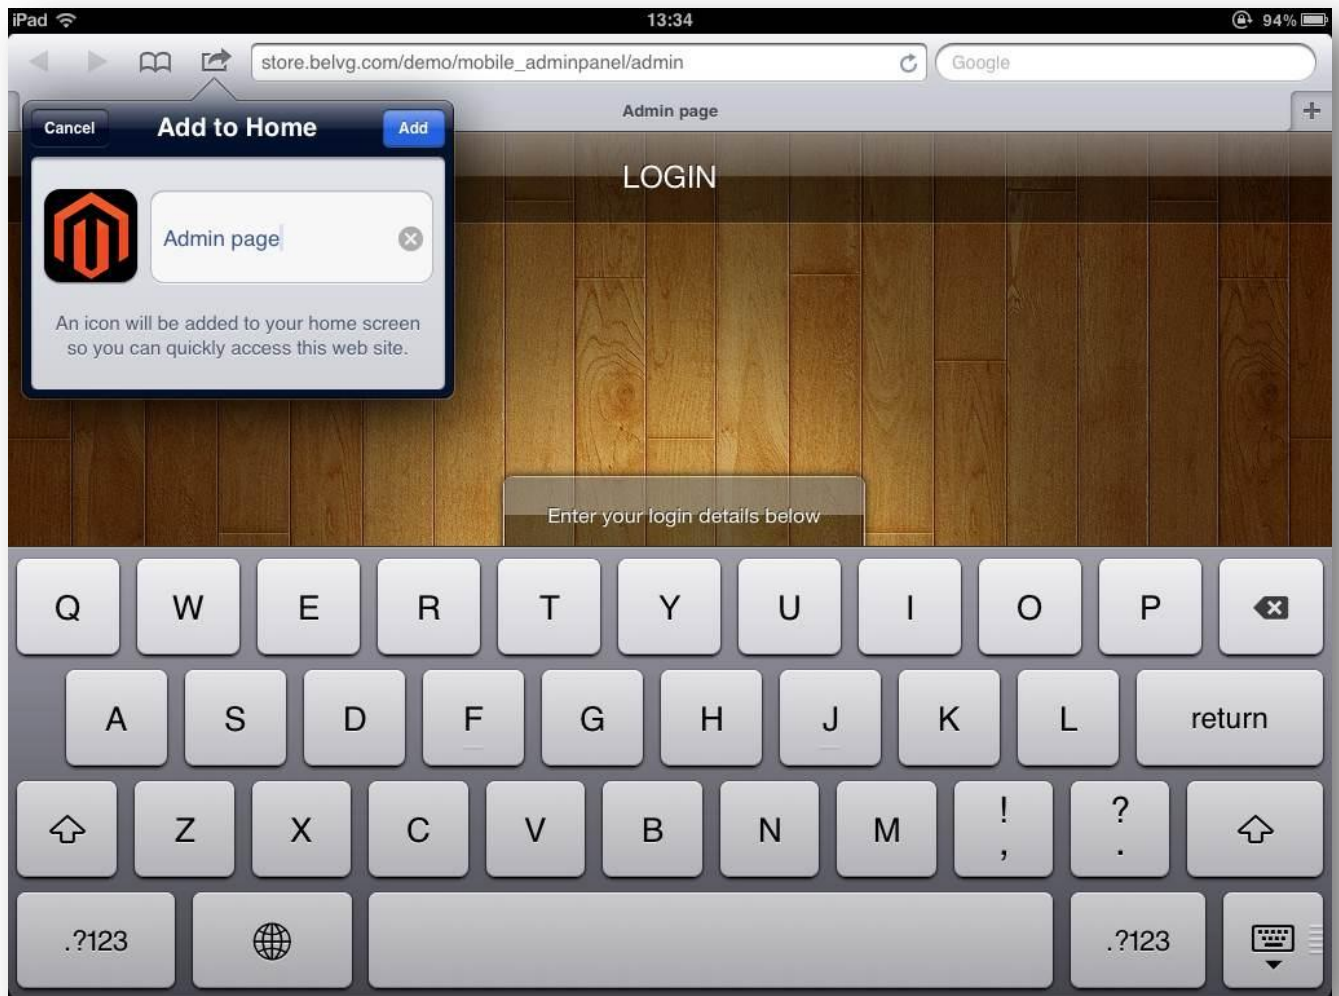

iOS (iPad)

1. Open Safari and navigate to the store admin panel
2. Tap the square with an arrow coming out of it next to the address bar

Tablet Dashboard

3. Choose "Add to Home Screen"

Tablet Dashboard

By doing this, you can run Tablet Dashboard as a separate app in fullscreen mode.

Android

1. Open the Android web browser and navigate to the store admin panel
2. Add your admin panel as a bookmark
3. Long press the bookmark and choose "Add shortcut to Home"
